

Connect Secure

Secure Access for the Next Generation of Applications

Empower mobile and remote workers with simple, secure, and seamless connectivity to enterprise resources.

Overview

While ensuring secure access for their remote and mobile workforce today, IT administrators are re-evaluating network policies to align and support mobile initiatives like BYOD and cloud computing.

New IT initiatives challenge today's technologies, processes and policies. Fueled by rapid technology change, many IT organizations today rely on five or more solutions to secure access to their corporate network and applications. Things can seem out of control when you introduce new services or try to scale existing ones. There is a simpler more powerful way. Consolidate your enterprise access with Pulse Connect Secure. It provides the intelligence, performance and flexibility to securely access any application with any device from anywhere. That puts you in control and makes your workers more productive.

Problems We Solve

Granular control with flexibility

Simple management of assigning roles and access to robust applications across PCs, Mac, tablets, and smartphones.

Self-provisioned BYOD

Self-service onboarding that configures personal devices with settings and software for Wi-Fi, VPN, etc.

Optimized user experience

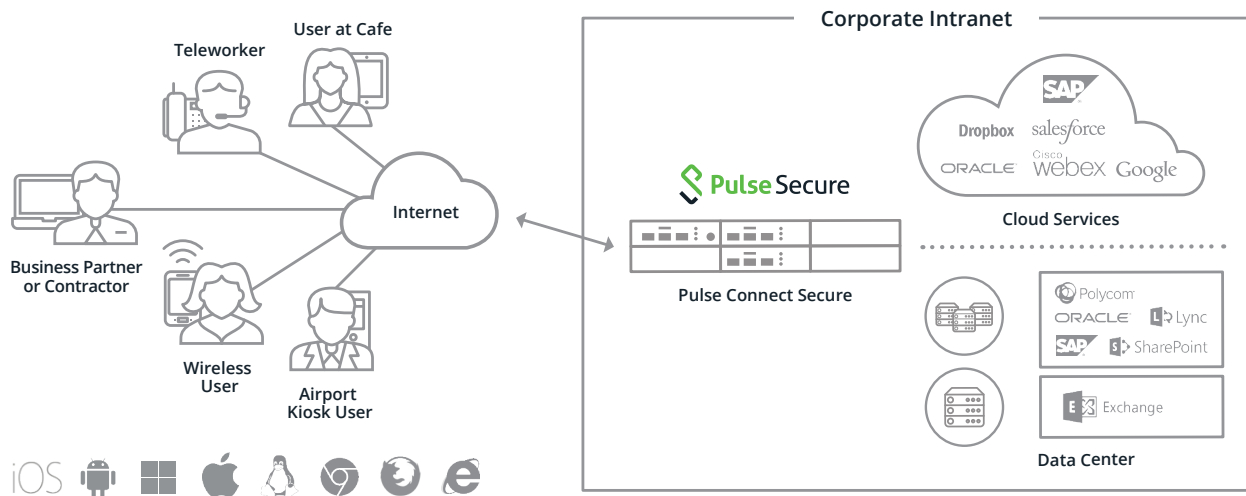

Client or clientless access with native UI familiarity and maximum connection performance.

End-to-end compliance

Comprehensive management from endpoint to datacenter identifying unauthorized devices and applications while remediating on demand.

Differentiated access for next-generation mobility

Pervasive mobile computing continues to challenge IT decision-makers as they balance between securing the network and providing simple, fast application access.

With Pulse Connect Secure, you have a proven mobility access solution that offers:

Granular auditing and logging

Configurations per-user, per-resource, per-event level via L3 to L7 for security purposes and capacity planning.

Unified access client

Easy, native UI that supports the broadest platform with posture assessment and seamless access from remote to on-site (via Pulse Policy Secure).

Application flexibility

Policy based connectivity for thick and thin applications including HTML5 support and per-app VPN.

Simplified management

Integration with market leading IAM and MDM solutions for seamless cloud and mobile access.

Rethink enterprise mobility with Pulse Secure

Legacy security solutions have become complex. Empower your mobile and remote workforce by supporting their workstyle. With Pulse Secure, your secure access should be easy, secure, and powerful.

Easy

A single, open platform for NAC and VPN that provides end-to-end management.

Secure

Laptop and mobile device security for end-to-end data protection and security compliance.

Powerful

User productivity boosted by existing datacenter applications and new cloud services.
